```
#include<stdio.h>
class integer
{

        public:

                 void print(char, unsigned)
                {

                        printf("Char, Unsigned\n");

                }

                void print(double, int)
                {

                        printf("Double, Int\n");

                }

                void print(char, int)
                {

                        printf("Double, Int\n");

                }

};

int main()
{

        integer in1;

        char ch = 'A';

        int number = 5;

        in1.print(ch, number);

        return 0;

}
// Program will be executed
```
