```c
#include<stdio.h>
class student
{
        private:
                int roll_no;
        public:
                student(int);
                int get_rollno()const;
};
student :: student(int x)
{
        roll_no = x;
}
int student :: get_rollno()const
{
        return roll_no;
}
int main()
{
        student sayema = 101;
        student salil(102);
        printf("Sayema's Roll number = %d\n", sayema.get_rollno());
        printf("Salil's Roll number = %d\n", salil.get_rollno());
        return 0;
}
```
